

Contour cut with sloping motif (printing to the edge)

Use a separate level to create a path that corresponds to the size and shape of your motif, assign a spot colour (full tone colour) to it, naming it "KONTUR", on a level of its own and preferably choose a signal colour (e.g. 100% magenta).

Note that the texts should not be too close to the cutting edges (at least 2 mm away) in order to avoid bleeding. Add at least 5 mm trim to each cutting edge. The contour cut may have a deviation of up to 1 mm.

Finally forward this level to the top position and export the file as PDF/X version (X-1a, X-3 or X-4).
